

# EUROMET PROJECT

## Final Report

1. Ref No.:	530	2. Subject Field:	Length																																																																										
3. Type of collaboration: Consultation on facilities																																																																													
4A. Partners:	JV, SP	4B. CEC funded?	No																																																																										
5. Participating Countries: NO, SE																																																																													
6. Title: Uncertainty components on line scale measurements																																																																													
7. Final report: This uncertainty budget refers to measurements carried out at JVs laboratories.																																																																													
$\Delta Y = (p_1 - p_0) + \delta L_{\text{sym}} + \delta L_{\text{HP}} + \Delta \phi D + \delta L_{\text{xy}} + \delta L_{\text{focus}} - \Delta T \alpha L$																																																																													
$\Delta Y$	Deviation from 1 m.																																																																												
1. $(p_1 - p_0)$	Reading, distance between position $p_1$ and $p_0$ .																																																																												
2. $\delta L_{\text{sym}}$	Correction for different symmetry of the lines, an imaging problem.																																																																												
3. $\delta L_{\text{HP}}$	Correction for calibration of HP-interferometer.																																																																												
4. $\Delta \phi D$	Correction for Abbe deviation.																																																																												
5. $\delta L_{\text{xy}}$	Correction for deviation in alignment of line of movement for reflector.																																																																												
6. $\delta L_{\text{focus}}$	Correction for deviation in focus.																																																																												
7. $\Delta T \alpha L$	Correction for deviation in temperature measurement.
