

NanoFabNet

international Hub for sustainable, industrial-scale Nanofabrication

- An Introduction -

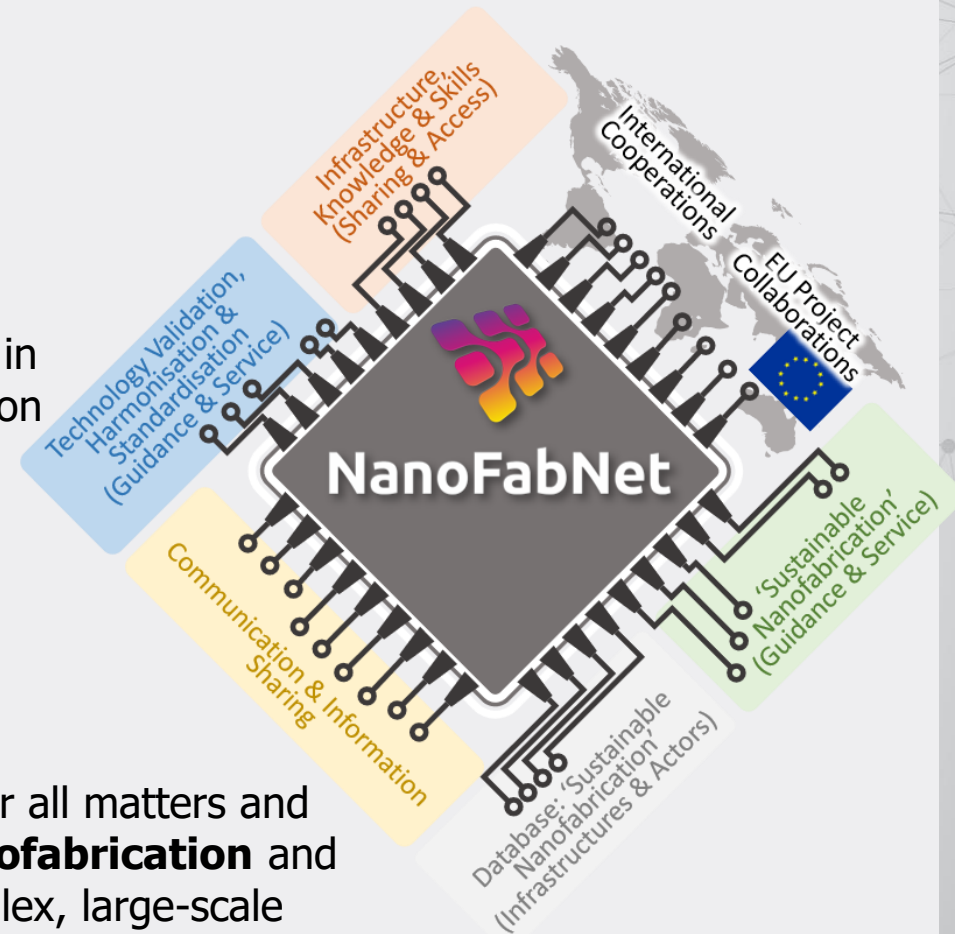

The *NanoFabNet* Objective

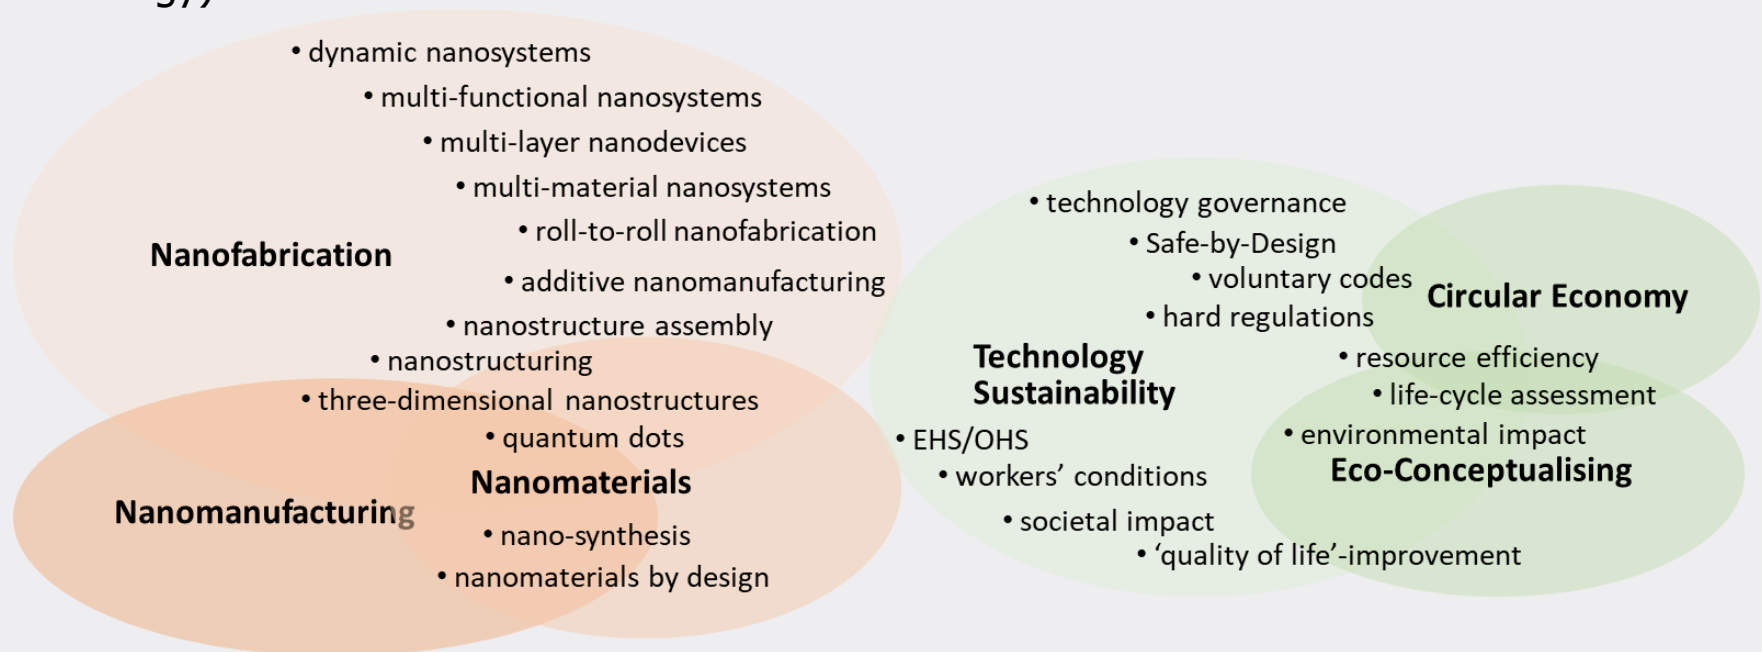

Central Objective

- Create a **strong international hub for sustainable nanofabrication**, whose structure, business model, detailed strategies and action plans are designed, agreed and carried by its international stakeholders during the Project duration, in order to yield a self-sustaining collaboration platform: the *NanoFabNet Hub*.
- A registered *NanoFabNet Secretariat* at the Hub's centre will provide an accountable, economically sustainable executive.
- The hub aims to be a **one-stop-shop** for all matters and concerns pertaining to **sustainable nanofabrication** and its successful incorporation into the complex, large-scale high-value industries by bringing together governmental and academic laboratories with large industries and SMEs.

... what is it and where can it be found?

It can be found at the overlap of cloud-like concept clusters (within the map of science & technology).

'Sustainable NanoFabrication' is made up of concepts that apply to both sustainability and to nanofabrication; it is regionally dependent in manifesting itself in the form of strategies, initiatives, certificates, policies (hard and/or soft), etc. ...
