Metrology in Short
Early Career Training (PhD)

MRA Support

Calibration Guides
Bilateral Comparisons.

Digitalisation (WGM4D)

Digital Calibration Certificates
Data Management
Sensor Networks.

Early Career Training (PhD)

- Aim is to share information relating to post-graduate training opportunities in metrology
 - New opportunities - calls for PhD/PG positions
 - Short-term laboratory secondments for PhD/PG students
 - New training courses for PhD/PG students
 - Winter/summer schools for PhD/PG students
 - Success stories related to TC-IM project 1548
- Contact points in NMI/DI will provide information to EURAMET secretariat which will then be amplified through social media and, hopefully, in future through web-site.
- Longer term aim to encourage collaborative post-graduate training between NMI/DIs

Looking to the Future

- What support is needed to make the case for a follow-on programme to the Partnership?
 - BoD has since set up a Working Group but TC-IM is available to support
- If there is no successor programme how do we continue delivering impact from world-leading metrology?

We would welcome suggestions on areas which we can assist on and which don't fall naturally to the single discipline Technical Committees or one of the EMNs
