

Mathmet Quality Assurance Tools: Feedback and Questions

If you have any comments or questions regarding the Mathmet Quality Assurance Tools (QAT), please email Mathmet@euramet.org. **Your** feedback will be important to the further development of the QAT.

Points to be considered could include:

1. Does the application of the QAT give you confidence in the data and software products provided by National Metrology Institutes, such as through Mathmet?
2. Is there anything missing from the QAT that would give greater trust in those products?
3. What information would you wish to be made available, and where, to convince you about the quality of those products?
4. Does your organization require that data and software products from third parties are developed using Quality Assurance Tools or a Quality Management System. For example, is there a requirement for third parties to be certified to ISO 9001, **TickIT^{plus}** or other certification schemes?
5. Would you be interested in using the Quality Assurance Tools yourself? Please give reasons for or against.
6. Does your organization already use Quality Assurance Tools or a Quality Management System for data and software?
7. If so, are you using written standards or guidance documents? Which ones?
8. What tools do you use to support the quality of data and software within your organization?
