

What makes the DAM course unique

Particular boundary conditions at DAM (Cord Müller)

Main message

- MU and applied statistics in one and the same course (« Mathematics »)
- Students: future verification officers
- Two different levels:
 - ~ 20 hrs for technical, 30 hrs for academic staff
- Course supposed to provide theoretical background rather than hands-on examples
- Small subset of a much larger curriculum (3 resp. 5 months full-time)
- Few graduates have to compute MU budgets in their professional practice later on.

Main message

-

- All the rest follows from there... theoretically

Idea or dream yet to fulfill

Hopes at DAM (Cord Müller)

Main message

- First level: Basic notions anchored solidly
- Second level: Graduates acquire enough mathematical skills to reason correctly on their own
- Third level: Documents (both internal and public) are quality-controlled and trustworthy
